# vCard Network

## Motivation

- Allow people to connect with me despite me not having social media
- Promote data ownership for personal connections rather than accept vendor lock-in

# How it works

- Combination of two widely used formats:
  - vCard
    - Format for electronic business card, widely used for contacts. cardDAV allows synchronization
    - Contains person's information: name, photo, organization, address, etc
    - Acts as the person's profile
  - RSS/Atom feed
    - Provides updates from a website
    - Acts as the person's feed

# Demo

- See profile and connections display in action on my website
- Example OPML export can be showcased on https://demo.tt-rss.org

# Try it out

- Check out the repository:

  https://codeberg.org/nfraprado/vcard-network

  

- Connect with me:

  https://nfraprado.net/profile.vcf
